Textile and Toxicity

Soil contamination threat looms large over Tirupur, the textile hub in Tamil Nadu, India, where dyeing units pollute the river. Sulphide formation is posing a danger of soil infertility in Tamil Nadu's textile hub Tirupur with River Noyyal, which flows through the country's biggest knitwear centre, still highly contaminated.

Though the situation has improved in contamination levels remain high when compared to other rivers of the region. Noyyal is still highly polluted and Tirupur is more polluted than its surroundings.

The study titled 'Pollution of Surface Water in Tirupur and its Adjacent Areas by Textile Effluents' was conducted by New Delhi-based advocacy group Centre for Science and Environment (CSE) to evaluate the extent of pollution of the surface water due to textile industry.

BEST PRACTICE

Rewarding workers for Attendance and punctuality

While some companies may be recognizing their workers with incentive for regular attendance, providing an incentive for being punctual could be an added Good Practice

We need Strength when doing the possible but need Faith when doing the impossible.
